## Task 2

1. Who thinks that ~~the~~ robots will assist teachers in the future?
2. Will robots help teachers in 2027?
3. What do some patients feel uncomfortable sharing with their doctors?
4. Is it human connection or creativity that is not present in robot cleaners or factory workers?
5. Robots ~~cannot get~~ are machines, so they cannot get tired, can they?

10

## Task 3

The text "Robot teachers?" written by Ian Wright and published by The News argues, that while the concept of robot cleaners or factory workers nowadays seems realistic, some people underestimate the ability of robots to teach.

One British education expert claimed, that the year of 2027 will be the year, when robots will start helping teachers at schools. Anthony Seldon, the aforementioned expert, proposes that the intelligent robots will analyze many aspects of a student behaviour to determine the best way to teaching them.

The text also mentioned ~~that~~ that there are many places with the insufficient number of teachers due to various reasons. But because robots are machines, such reasons as ~~the~~ fatigue or low wages do not

impact them.

In my personal ~~opion~~ opinion, the presence of robots to assist teachers at schools is one of the best solutions. It will ensure, that every single student is receiving education.

## Task 4

I have suddenly become a balloon that was flying over the ~~city~~ countryside. From such a great height, all the landscape of beautiful forests and rivers was exposed my sight. I saw lumberjacks chopping down trees, fishermen catching fish and children ~~running~~ playing in the nearby village. As I was flying above them, the sunrays pierced me, and the dark shade of crimson colour covered the villagers. They lifted their heads and gazed at the giant red balloon soaring above their lands. "Is ~~he~~<sup>it</sup> spying on us?" asked one young boy his father. "I don't think so. It ~~has nothing~~ is just a balloon", the father ~~was~~ replied. And it was true. I, the balloon, had nothing on me. I was but a red soaring sphere. ←

As I left the village and stopped blocking the sun, the red crimson blanket disappeared from village as well.

I was approaching a beach and noticed the glimmer of pearl sand shimmering below. I felt how the temperature dropped. There was also a cliff,

24-99-20-61

(128.1)

where <sup>lapis</sup> waves were hitting the rocks, and with each hit, it looked like as a bunch of viridian gemstones ~~were~~ <sup>was</sup> tossed in the air. But as I was approaching the coastline, the waves ~~were~~ <sup>ed</sup> starting to get more and more merciless, chiseling the rocks even harder, and gemstones flying in the air even higher. The razor-blade edges of the cliff would surely tear me apart, but thankfully the airflow changed, and I changed the direction.

~~All of a sudden, I have started to lose my altitude and the size of my balloon started to diminish. In the span of thirty minutes, I have found myself on a clearing in the oak forest. A scent of flowers was present in the air, and ~~warm~~ sun~~

All of a sudden I have started to lose my altitude. The size of my balloon started to diminish. A mesmerizing feeling of freshness and happiness entered my head, and I seem to have somehow closed my eyes, which ~~was~~ <sup>was</sup> I doubt I even had. After a while, I have found myself in the clearing of an oak <sup>forest</sup> ~~forest~~. A scent of flowers was in the air, and a book was on my stomach. I had different drawings of air balloons, air planes, helicopters and even aircrafts. I closed my history textbook and put it in my bag. I looked around. The scenery of nature around me was displaying the purest form of tranquility. "Fare well", I said to such wonder <sup>ful</sup> place and left, while the sun was shining on my back and birds were chipping.

~~The Author:~~

Title: "Robot teachers?"  
 author Ian Wright  
 source The News

main events:

some examples

personal opinion:

main events:

robot cleaners, or factory workers - common

Doctors - already good teachers:

Many factors:

The author of the text claims that

"Robot teachers?" <sup>written</sup> by Ian Wright <sup>and</sup> published by The News argues, that while the concept of robot cleaners of factory workers seems realistic nowadays, some people underestimate the ability of robots to teach

According to the British Education expert, who claimed that One British expert made a claim, that robots will be able help teachers

One British education expert claimed that the year of 2027 will be the year, when robots will start helping teachers at schools. Anthony Seldon, the afore mentioned British experts prepares

One British education expert, who claimed that robots will be able help teachers at schools. Anthony Seldon, the afore mentioned British experts prepares

that intelligent robots will be able to analyze <sup>different aspects of students</sup> the behaviour of a student to figure determine the best way of transferring information. (21) (90)

Jan Wright also discusses how there are many places with the insufficient number. 5% of teachers. He mentions, that 9-16 percent of kids, who aren't 14, do not go to school. 120.30

In my personal opinion, ~~is that~~ robots will eventually help teachers at schools. High efficiency and unbiased approach of robots allow <sup>them</sup> to ~~be~~ lay a firm path to ensure, that the students

But suddenly, I have realized. The text <sup>also</sup> mentioned how they are many places. with the insufficient number of teachers due to various reason. But robots are machines, so no tiredness or low wages can ~~influence~~ <sup>impact</sup> them.

I have suddenly become a balloon, flying across the countryside.
