Task 2

1. Which parts of a teacher's job are better left automatised?
2. What advantages over humans do robots have?
3. Is it possible for robots to completely replace teachers?
4. What does Anthony Seldon say about the future education?
5. Will robots be able to understand each student individually?
6. Why are so many teachers quitting their job?

Task 3

Outclassed in your classroom?

By Ian Wright
The News

Nowadays, it is not uncommon to see various jobs being left to robots. Although artificial intelligence is not trusted with professions involving interactions with humans, it can still perform better in ~~some~~ cases such as medical diagnosis. But what about schools?

Anthony Seldon, an education expert proclaims that by 2024 robots will have completely replaced teachers. He predicts them to analyze each student to find the best way of educating him or her. However, most people believe that robots will never be able to replicate human empathy required for such a job.

What robots can be used for is solving the most tedious tasks. Teachers often quit their jobs because of stress and tiredness, which software ~~is~~ is not capable of feeling.

What software can be used for ~~is solving the most tedious tasks. Teachers often put their jobs because of feeling stressed and tired, which robots are not capable of.~~ In my opinion, using software for writing reports and checking homework is the best compromise, as

However, software can be used for most tedious tasks like ~~checking~~ reports and checking homework. In my opinion, it is the best compromise as teachers will have more time for their main job.

Suddenly, I turned into a ~~balloon~~ flying in the sky. I ~~was still~~ conscious, but I had no control over ~~myself~~. I was floating aim

Suddenly, I turned into a balloon flying in the sky. Even though I was conscious, I had no control over myself. I could see and hear, but I couldn't move or speak.

I was floating aimlessly, slowly gaining height. At first I flew above an urban town with high skyscrapers, traffic jams and buzzing streets. Going higher, I was able to look in some windows around me: Some ~~rooms~~ rooms were empty, while ~~others~~ were crowded with people throwing a party. They were happy, with their lives ahead, unlike me. I was helpless and alone.

After the town, I flew above a wide river. I could perfectly see my reflection in the clear water, and it made me think more and more. I wasn't scared of ~~the fate~~, I was disappointed that I had not even a bit of control over it. Cars were crossing the bridge, tourist yachts were going back and forth, seagulls were hunting for fish. Life, life was all around!

~~I was floating~~

(128.2)

I grieved the life I had lost. My family, my friends will never see me again. They won't even know what happened to me. And I won't either! As the sun went down, I started deflating. I went lower and lower to the ground.

"That's it," I thought. "This is where it ends."

I was almost touching the ground when a strong and ruthless wind picked me up. Like a living being, it carried me and threw me onto a tree where I got stuck. It felt even more hopeless now. Before, I was able to see the beauty of life around me, and now the journey is over. No one was there for me, there was no escape. Or so I thought...

"What is this? Are you alive? What are you doing here?"

"I don't think it is alive. It has no eyes and no mouth. But what could it be, then?"

I felt offended, but I couldn't say anything. In both senses. Besides, whose are these voices? Maybe their owners could help me escape?

There were two blue tits observing me. Behind them, there was a nest filled with eggs. They seemed to be cooing.

"I think we should get rid of this, John" — the female tit said. "It's going to scare our children"

"I agree, but I won't get it out myself. You'll have to help me, Mary" — responded the male.

Together, the birds moved the little branches, but they couldn't free me. They were visibly annoyed, and I wondered how I could understand what they were saying.

They almost gave up when I suddenly felt something grab my so-called tail and move me along. In a matter of seconds, I was

Free from the branches. I looked down to see my rescuer: it was a little girl sitting on the shoulders of a man, likely her father. Both of them seemed familiar... Wait!

It's my sister and dad! What are they doing here? Do they recognize me? The girl ~~wasn't~~ didn't let me go, instead she was throwing me into the air and laughing.

Then I woke up. It was hard for me to make out my surroundings, but it seemed like a hospital. Was I sick? Well, It explains a lot. In front of me was my family, crying tears of joy. My sister was holding my hand.

"You're alive, Eugene!" - they ~~were saying~~ ^{cried out once.}

"We can't be ~~more~~ happier."

"Where am I?" - I said. "What's going on?"

"You've been ~~in~~ a coma those three days. My God, You're alive!" - said my mother.

My dad was crying, my mother was, too.

My sister hugged me tightly.

"Wait, Eugene, I have a gift for your recovery"

- She said, handing me a red balloon.

I had my life ahead of me.

~~Every day~~
Robots

Nowadays, it's very common to see various jobs being left to robots instead of humans. However, the AI isn't trusted enough when it comes to jobs requiring ~~connection~~ connection to humans, such as medicine and education. However, robots can be more exact in terms of diagnosis.

42

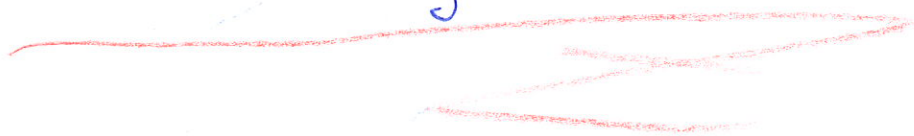

Anthony Seldon, an education expert proclaims that by 2021 robots will have taken over the classroom. He predicts that robots will analyse each student to form personal connection.

But not everybody thinks robots will ever understand humans, but Everybody agrees ~~that~~ on the ~~subject~~ hardships of teacher's work.

What robots can do, however, is to replace the most tedious part of work. Teachers often quit their jobs because of stress and tiredness, which robots aren't capable of feeling. Software can be used for checking homework and writing reports, while teachers help their students learn. In my opinion, it is the best compromise.

Outclassed in your classroom?

The news

1 Nowadays, it is very common to see various jobs being left to robots. Although artificial intelligence is not trusted when it comes to jobs involving communication with humans, such as medicine and education, it ~~can outclass humans~~ can perform better in some cases, such as diagnosing patients.

1 Anthony Eldon, ...

What can the lack of teachers result into?

But most people believe robots will never be able to replicate human empathy. ~~What their advantage is is being able to~~
However, unlike workers, robots are not capable of feeling stressed or tired of their work. Leaving the most tedious parts of job to robots not only makes it easier

To my mind, using software is the best way.

sparrow's nest.

God stuck in a tree, a butterfly

I got stuck in a tree, it seemed

It felt hopeless. There was no one here for me. I had no way of escaping. Ok so I thought.

"I suddenly heard a voice I was able to understand.

"What are they? What are you doing here?"

It was a blue bird, looks like I've disturbed a family.

"I don't think it is alive". Said the other voice. "It is ~~too~~ big. We should

I felt offended but I couldn't blame him for thinking so. I had no eyes, no mouth, no way of controlling myself, ~~however~~ but why could I hear and see?

"We should get rid of it then. It's scaring the children!"

"I won't be able to move it alone, Mary. Help me!"

And then I woke up. It was all a dream

I was standing in ~~the~~ in front of the exit door.
