Consumption of fast foods among modern teenagers.
 In this investigation I wanted to compare understand what fast foods the modern teenagers prefer and compare them to the fastfoods of the teenagers of the year 2010.
 Most adults tend to criticize fast foods. We decided that the survey should be conducted by underage people who won't intimidate the participants. Investigators offered one question to the participants from 20 different countries, "what 25 meals

do you eat the most often? Each fast food gained a point for being mentioned. The points were converted to the charts demonstrated below.

In comparison to the 2010th's ~~inves~~ ~~research~~ ~~nowadays~~ teens eat less pizza and hamburgers, but more hotdogs and sandwiches.

Nowadays teens eat sandwiches ^{who often} ~~there are~~ approximately ~~the~~ two times more teens eat sandwiches than teens who ^{often} eat pizza, hamburgers or hotdogs. Nowadays there are two approximately two times more teens who often eat ~~pizza~~ ^{sandwiches} than teens who often eat pizza, hamburgers or hotdogs. In 2010 that there were 10 per cent more adolescents who often consumed hamburgers ^{quite often} than ones who used to eat ^{quite} a lot of pizza; fifteen per cent more than ones who ^{often} ate sandwiches, and 20 per cent more than ones who ate hotdogs. Since then the difference in numbers has changed pretty much - ~~have~~ sandwiches won our hearts and ~~now's~~ almost no competition one to compete with them. Hamburgers now are the least popular food.

Probably, this might be the result of our modern health-centred way of living, because sandwiches are one of the healthiest fast foods of all and hamburgers are the least recommended by any doctors, because of all the grease and fat. But this result might also be caused by financial crisis, as sandwiches are the cheapest of all four ~~or~~ compared meals, and hamburgers are the most expensive.

Anyway, it seems to me that both crisis and health-centredness are going to gain pose in the future, so the difference in numbers will only get bigger and more substantial, and sandwiches industry will gain more customers.

In this investigation I wanted to compare understand what fast foods the modern teens prefer and what fast foods ~~preferred~~ were preferred by teens of 2010.

To minimize the probability of given by the participating in the survey teens to be incorrect all the investigators were complete strangers to the adolescents, underage (because of the tendency to deceive the truth about

Most adults tend to criticize fast foods and teens tend to deceive things in front of such people. This is why we decided that the survey should be conducted by underage people, because who won't intimidate the participants. The participants were given one of each one question to answer, "What is

do you eat the most often?" Each fast food gained a point for being mentioned. The points were counted and afterwards and the demonstrated graph was made.

In comparison to the same eat investigation conducted in 2010 nowadays teens prefer sandwiches almost two times better than pizza, hamburgers and hot dogs. Though in 2010 teens liked hotdogs. Hamburgers are approximately 20 percent more often than pizza; and sandwiches doubled the popularity among adolescents. The sandwich industry has raised incredibly in six years.

To say the truth sandwiches appear to be the healthiest of all the fast foods, so and according to tendencies this reason which might also be the reason of such drastic changes in hamburgers is the unhealthiest foods of all.

Consumption of fast foods among modern teenagers.

~~was~~ provided by the fact that the
 In this investigation I wanted to
 compare what fast foods the amount
 of the preferences of modern teens
 and the teens of ~~the year 2010~~ to see
 or because provided with no customer

~~control policy of fast food restaurant's, I couldn't count
 and compare their income, as none can tell for sure
 what exactly~~

provided by
 to minimize the probability of incorrect ^{the data} incorrect
 data given by the ~~teens~~ participating in the survey ^{teens} data
 to be being incorrect, all the investigators were
 complete strangers to the adolescents, they were
 underage and the all the ballots (slips) were
 anonymous. Each participant was to state ~~how much~~
 money and often he or she consumes different
 types of food - at first naming the food himself
 and at second answering direct questions about
 some foods (e.g. corn, chips, pizza) so that he
 or she wouldn't get the actual purpose of the survey
 and give what foods he or she consumes the
 most often, and for each mentioning ~~of~~ type of
 fast food gained a point for ~~be~~ when it ^{was} being mentioned.
 Then ~~together~~ one hundred per cent scale was divided
 accordingly to the ~~points~~ final points, and this scale ~~is~~ per
