Task 4.

In today's fast-paced world the question that has received increased popularity is about the four-day workweek. Nowadays many companies opt for reducing the number of working days from five to four in a bid to enhance their productivity. Is it really beneficial? I will analyse the sides of the issue in this essay.

To start, the four-day workweek has significant advantages. Firstly, it provides employees with an extra day-off, enabling workers to better maintain work-life balance and "recharge their batteries". Thus, the risk of burn-out reduces profoundly, and employees get back to work more energised. Secondly, with more motivation workers are able to perform their functions efficiently, improving their company's results. To my mind, these perks are considerable, proving the effectiveness of the system.

Nevertheless, some shortcomings are also present. One major drawback is that the four-day workweek is hugely dependent on a specific sphere. For instance, such industries as retailing, healthcare, customer support require round-the-clock management in order to communicate with clients. Another downside is constant pressure employees are under. Workers report being anxious to lag behind the four-day tight schedule and skip the deadline. In my view, such claims ~~are reasonable~~ sound reasonable and demonstrate a company should accurately assess their capabilities before implementing the system.

Overall, the four-day workweek is a rather conflicting business concept. I firmly believe it demands scrutiny to implement this approach in a company.

$K4 = 29$
 $K1 = 13$
 $K2 = 8$
 $K3 = 4$
 $K4 = 4$

Task 5.

SOCIAL MEDIA? NEVER HEARD OF

If in the past people would make friends with someone from a neighbouring house, today everybody is friends with someone from a neighbouring social media platform. Our world is pervaded ~~with~~ with online interactions, digital friends, and chatting. Everything we normally call "social media". But imagine our current reality without it... Tough? Then here are my suggestions what might it looked like.

HALE AND HEARTY

Imagine... In the morning you are exercising. In the afternoon you are ~~engrossed~~ engrossed in yet another book you have taken from a library. In the evening you indulge in a lively in-person conversation with your dearest and nearest or start a hand-written letter to share news with bosom friends. Just you having the time of your life. No social media, no doomscrolling, no notifications. Adaptation ~~would~~ takes some time, though, but instead of scrolling social media you gradually fill your life with meaningful activities. But something is missing, isn't it?

THE MISSING PUZZLE ~~and communications~~

The missing part is career. Undeniably, many jobs today are thoroughly digitalised, and we cannot dispose of them. Almost every occupation, from teachers to businessmen, requires social media. Sharing instant messages, getting news, producing and exchanging valuable content is where social media can really lend us a hand.

ЧИСТОВИК 3

Overall, if social media didn't exist, our life would be at some point easier. But in the long run, we wouldn't be able to live without its perks.
